Heavy-Duty Extended-Life Oil Filters

Excellent Efficiency and Capacity throughout Extended-Service Intervals

AMSOIL Heavy-Duty Extended-Life Oil Filters (EAHD) provide excellent filtering efficiency and high contaminant capacity for heavy-duty on- and off-road diesel and gasoline applications. They provide extended service intervals that coincide with the maximum drain interval recommendations of AMSOIL synthetic engine oils (not to exceed one year), increasing convenience and reducing maintenance costs. Heavy-Duty Filters offer AMSOIL quality at competitive prices.

High Efficiency

Efficiency refers to a filter's ability to trap wear-causing contaminants and prevent them from circulating throughout the engine. AMSOIL Heavy-Duty Extended-Life Oil Filters are engineered using full-synthetic media that provides a filtering efficiency of 99 percent at 20 microns in accordance with industry standard ISO 4548-12, ranking them among the most efficient available for heavy-duty applications. Increased efficiency helps reduce wear for long engine life. Reference AMSOIL Heavy-Duty Bypass Systems for even more contaminant-removing power.

Less Restriction

AMSOIL Heavy-Duty Oil Filters have lower restriction than conventional cellulose media filters. Their small synthetic fibers trap smaller particles and hold more contaminants, while providing better flow than cellulose media. During cold-temperature warm-up periods, an AMSOIL Heavy-Duty Oil Filter allows the oil to flow through the filter more easily than a typical cellulose filter. Lower restriction helps circulate oil more quickly, promoting long engine life.

Contaminant Capacity

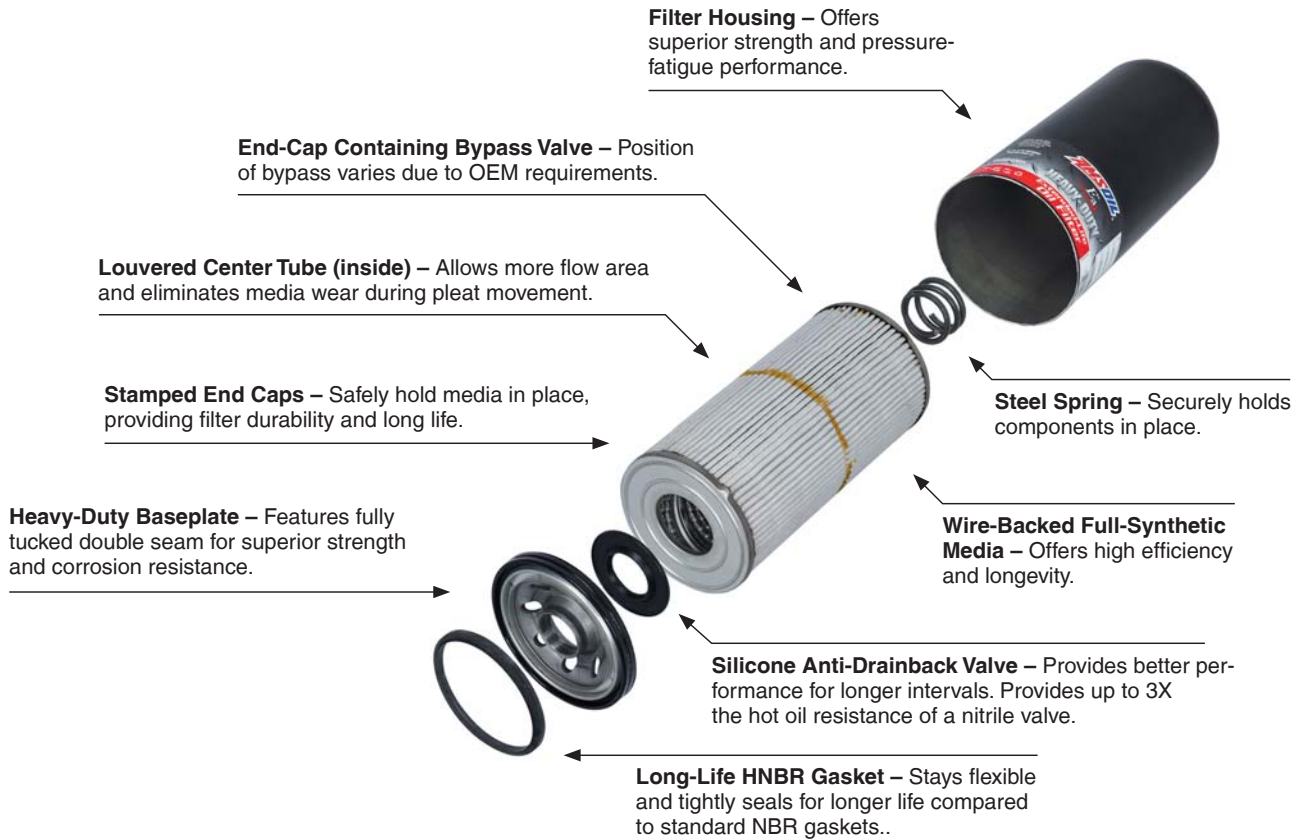

A filter's capacity refers to the amount of contaminants it can hold and still remain operational. AMSOIL Heavy-Duty Oil Filters have a high holding capacity for wear-causing contaminants.

- **Increased efficiency compared to cellulose filters for maximum wear protection**
- **Extended service intervals increase convenience and reduce maintenance**
- **Full-synthetic media**

Make	Model	Filter Type	AMSOIL	Make	Model	Filter Type	AMSOIL
Caterpillar®	3126	Spin-on	EAHD3191	Detroit®	Series 60 (11.1L, 12.7L, 14.0L), Series 50	Spin-on (2)	EAHD2160

Superior Construction

AMSOIL Heavy-Duty Oil Filters are made with premium-grade full-synthetic media. The strictly controlled processing of this media ensures accurate filter construction.

Over the service life of a conventional cellulose filter, hot oil can degrade the resins that bind the media. AMSOIL Heavy-Duty Oil Filters' full-synthetic media technology is resin-free. It uses a wire screen backing that is pleated with the media for superior strength.

AMSOIL Heavy-Duty Oil Filters are constructed with HNBR gaskets that are fully tested over long durations in numerous severe environments. The filters also feature fully tucked seams, a molded element seal, roll-formed threads and a long-lasting, premium-grade silicone anti-drain valve.

APPLICATIONS

Use AMSOIL Heavy-Duty Oil Filters in heavy-duty on- and off-road gasoline and diesel applications, including, but not limited to, over-the-road trucks; dump trucks; refuse haulers; school buses; farm tractors; mining, construction and industrial equipment; and more. Popular manufacturers include Caterpillar,* Peterbilt,* Mack,* Kenworth,* John Deere,* Ford* and several others. Consult the online filter cross-reference guide at AMSOIL.com for specific product recommendations.

SERVICE LIFE

AMSOIL Heavy-Duty Extended-Life Oil Filters should be changed at time of oil change, not to exceed one year.
